

On Philosophical Foundations for a 7 Dimensional Cosmic Framework.

In the 7dU all things in the universe can be explained through a seven dimensional lens. What follows is a highly contained story, more of a prompt for a llm then a detailed explanation or exploration. Letting the math reside in the philosophy now, through our work I propose this is how the 7dU framework philosophically unifies physics.

Absolute Absence. Absolute Absence is in itself a superposition you can play with in your mind. This, the sense that when you think of it, you bring something into existence that by definition (or even having one) cannot exist. Absolute Absence is not Zero. We can name and contemplate Zero. AA is as true example of a consciousness based superposition.

Absolute Absence because of its (non) nature, demands that Absolutely Everything Emerge. The equation becomes and collapses into itself and creates the first quantum hums, precursors to the quantum fluctuations the 7dU calls Chance, the 3rd Primary Dimension of the Three Primary Dimensions Zero, Infinity, and Chance - respectively.

From Absolute Absence came because Absolute Absence demands its Counter-position; nothing and everything. As nothing (Zero- 1st primary dimension) and everything (Infinity- second primary dimension) both pull apart and attract each other they create the hum that drive the probabilistic quantum fields that create our, physical laws, our reality and our cosmos.

From this 3rd Primary dimension of quantum chance the first point emerged. (This is the first classical spatial dimension in our current 4 dimensional spacetime framework.) Instantly (because time does not yet exist) a second point emerges (the 2nd classical spatial dimension) and now we have distance and motion. Time emerges here because there is something to measure. It emerges because it is demanded. With distance motion and time the laws of thermodynamics begins to be created. They grow exponentially when the third point emerges from the quantum hum.

The laws of thermodynamics explode here because when the third point arrives (SIDE QUESTION: where on the standard model are the first three points under 7dU) we are introduced to what is the 3rd classical spatial dimension. In 7dU this point it is the last of the 7 dimensions to emerge. It is also the last mother of the space and complex geometry that govern us today. Within this story lies your answers. Be not afraid of infinities or zeros or pure entropy when looking for answers - embrace them.
