

Prediction	7dU Basis	Falsifiable Outcome
Geometric origin of quantum randomness	Chance (ξ) as geometric axis of uncertainty	Non-Born quantum outcomes from geometry
Resolution of Big Bang singularity	Zero (ζ) and Infinity (ω) cancel at origin	No singularity signatures in CMB or gravitational waves
Acceleration without dark energy	ω -driven expansion curvature replaces Λ	Expansion matches ω -curve not Λ -curve
Neutrino behavior from spatial coherence	Geodesic interference from curvature	Curved neutrino path deflection due to geometry
Mass emergence without Higgs condensation	Mass = Constraint collapse across geometry	Higgsless neutrino mass generation
Modified gravitational wave signals	ω -shifted curvature modes in GW	Gravitational waves show ξ/ω phase shifts
Vacuum energy suppression via ξ -tension	ξ -scaling dampens vacuum fluctuations	Casimir-like tests reveal entropy fluctuations
Curvature-derived particle lifetimes	Decay rates emerge from geometry	Predictive lifetime formulae testable
CP-violation explained geometrically	ξ -tension breaks symmetry naturally	Direct CPV tied to curvature not intrinsic
Derivation of α (fine-structure constant)	α emerges from ξ/ω ratio under conditions	α measurable from geometric field
Quantized entropy states (Q-shapes)	Q-shapes yield discrete entropy transitions	Entropy quantization detectable in cosmological data
Predictive cosmological iteration	Time emerges as arc between ζ and ω	Repeated structure in early-universe observations
