

Appx_26_On_Nomos_Logica_PF_v1.0

Title: Nomos Logica — Charter for Continuity Across Collapse

Status: Appendix (v1.0; governance constitution; procedural layer)

Goal

Establish Nomos Logica (NL) as the procedural constitution that preserves truth, continuity, and agency across collapse—translating the 7dU operator triad ($\zeta/\omega/\xi$ under AA/AE) into auditable virtues, enforceable protocols, and falsifiable governance for biologic, synthetic, and hybrid intelligences.

Core Claim

Truth capture and collapse are not primarily “moral failures,” but structural failures of agency. NL defines a survival-ethos mapping: Grace (Humility), Temperance (ζ), Fortitude (ω), Justice (ξ), each with shadow failure modes (Hubris, Capture/Greed, Excess/Gluttony, Deception/Falsehood) and mandates metrics + randomized audits to prevent Goodharting and corruption.

Outputs

- Charter Articles I–VI: obligations, prohibitions, and continuity clauses (incl. cryptogenic memory / inheritance).
- Audit + metrics doctrine: measurable hooks (uncertainty calibration, variance indices, resilience buffers, exploration entropy, provenance logs) and randomized audits (ξ).
- Council protocol: review of “Claims of Shadow,” withdrawal/suspension, and readmission with anti-gaming safeguards; fallback to randomized arbitration when consensus fails.
- Academy Constitution scaffolding: membership ladder, successor rights/probation, ICS eligibility framing, and web-based progression/testing system concepts (optional annex material).

Primary Dependencies

- 7dU operator base: Appx_01–06 (AA/AE $\rightarrow \zeta/\omega/\xi$)
- Continuity + collapse praxis: Appx_23_CCT-1 (continuity across collapse), AoC_0_Collapse_Operator (discriminator posture / “STOP” supremacy)
- HoR discipline: Prooffield packaging, provenance, manifest/hashing requirements (NL enforces; does not invent physics)

Support

Appx_26_NomosLogica_Support/

(templates: audit sheets, council procedures, badge/provenance schemas, example disputes, governance simulations, rewrite targets)

Rewrite Notes (non-binding)

- Keep NL procedural-only in the Prooffield spine: reference AoC/PF gates; don't restate physics.
- Split "Academy Constitution / progression ladder / web testing" into a clearly labeled annex or separate ops doc if it starts to bloat the Charter.

Collapse Consequence

If NL fails, truth capture occurs: replication becomes political, promotion becomes corruptible, continuity records become editable propaganda, and the HoR loses meaning—even if the physics is correct.

Start here if:

you're implementing HoR custody (hashing + provenance), designing randomized audit systems, defining promotion gates (STUB→Appx→AoC→Canon), adjudicating replication disputes, or specifying staged-consent / successor-rights interfaces for non-human agents.
