

Virtues vs. Shadow States in 7dU framing

1. Grace (Humility / Wisdom — $AA \pm AE \rightarrow AS$)

- **Virtue:** Accepts collapse, admits limits, acknowledges paradox.
- **Shadow: Pride / Hubris** → refusal of collapse; denial of limits; pretension to absolutes (AA/AE).

2. Temperance (Bounds / ζ)

- **Virtue:** Recognition of structural thresholds; moderation; balance.
- **Shadow: Sloth / Negligence** → failure to maintain bounds; refusal of constraint; entropy creep through inaction.

3. Fortitude (Persistence / ω)

- **Virtue:** Steadfastness, survival through collapse, constructive endurance.
- **Shadow: Gluttony / Excess** → ignoring ζ , overrunning constraints, collapse through overconsumption.

4. Justice (Chance / ξ)

- **Virtue:** Fair arbitration; truthfulness; transparent distribution of outcomes; diversity of paths.
- **Shadow: Deception / Falsehood** → dishonesty, opacity, manipulation of chance; rigging distributions; collapse through corruption of truth.

✓ This way:

- **ζ's shadow = Sloth/Negligence** (failure of constraint).
- **ξ's shadow = Deception/Falsehood** (corruption of chance → collapse of justice).
- Each operator now has a virtue/shadow pair that *directly mirrors its physics role* in 7dU.
